DG Cedar Oil Bug Off Personal & Pet Insect Spray

A natural alternative to chemically based pest control products. Offers protection from fleas, ticks, flies, mites, mosquitoes, lice and more. Texas hill cedar trees are commonly known to be naturally resistant to many insects. Many unwanted insects cannot tolerate the effects of cedar oil extracted from this wood. Such pests will immediately leave all areas treated with this oil based solution as it is naturally intrusive to their bodily functions. If they don't leave they face an uncertain future.

For personal use: This cedar oil ready to use formula is designed for use as a spray on your skin personal insect repellent. Offers temporary protection from many annoying pests including gnats, ticks, fleas, flies, chiggers, mosquitoes and more. Will neutralize and repel a host of other parasitic creatures too. An all natural and chemical free solution that provides great protection with a mixture of aromatic red Texas cedar oil and hydrated silica. Not only will this solution repel these pests, it will also neutralize them whenever the spray comes into direct contact with insects of the arthropod family.

Personal use directions: Simply spray on skin wherever protection is desired. Apply as often as needed. For facial application we recommend spraying on hands and messaging onto skin where desired. Avoid contact with eyes.

For pet use: For use as a topical spray on preventative that works on the surface of the skin to be effective. Apply directly to your pet as an insect control agent and skin rejuvenator. This formula excels at flea, tick, mite and ear mite control. Helps neutralize active mange and mange mites or other parasitic related skin problems. Enhances the healing process for damaged skin often associated with these conditions. Healing of yeast and bacterial infections of the ear can also be assisted using this cedar oil solution. Cedar oil de-hydrates and neutralizes insect eggs and larvae to help reduce annoyance from future generations.

Directions for pets: This solution will temporarily neutralize and/or repel pheromone driven insects on contact. Apply spray directly to your pet or onto any unwanted pests when seen. Can use as often as desired. As a general rule, use before or after going for walks or going to any unknown environment. Spray as desired/needed directly on your pet including paws, legs, pits, groin, belly, neck, tail and rectum area. For facial application, spray product on hands and rub onto the area while avoiding contact with your pets eyes. Can also be applied to bedding areas, inside dog houses or other frequented areas.

Cedar oil is a natural anti microbial and promotes healing of flea dermatitis and dry flaky skin. Great for treating hot spots, mange, burrowing mange mites, ear mites and other parasitic related ailments. Promotes healing of insect associated skin issues commonly found on animals. For existing problem situations (ie: mange or other chronic issues), repeat applications to affected areas at least 3 times daily. This will help stimulate hair growth and help your pet naturally heal damaged skin. Ear dropper applications into the ear will help relieve effects of ear mites and other chronic fungal organism issues.

For 1st time applications, spot test and look for possible objection to the presence of cedar oil. While grooming, cats especially may ingest the formula by licking excessively. Pet owners may observe their pet develop an upset stomach or other mild reaction. Cats have been known to regurgitate a white foamy substance. If this occurs be prepared to rinse the formula from applied areas and discontinue use.

Personal and Pet Notifications:

- Do Not apply mist near any open flame. Extinguish all pilot lights near treatment areas.
- Do Not Use on or Spray Around Pet Reptiles, pet rabbits, pet mice, pet rats, pet ferrets, pet guinea pigs, or exotic pet birds.
- Keep out of reach of children. Not intended for internal consumption.
- Ready-to-Use - do not dilute.
- Safe to apply on skin. Avoid direct contact with eyes.

Minimum risk pesticide exempt under FIFRA section 25B.
