Texas Red Cedar Heartwood Granules - 10 lb. bag

From the center of choice and aged red cedar trees common only to East Central Texas. These granules contain high concentrates of aromatic red cedar oil which is offensive to insects.

Cedar granules can be used to control insects on lawns, in planters, in flower beds and in vegetable gardens. Also helps control grubs. Excellent for use inside atriums and with indoor planter boxes. The long lasting aroma will repel fleas, ticks, mosquitoes, roaches, scorpions, flies, no-see-ums, rodents, venomous snakes and more. Cedar granules have no adverse effect on beneficial insects such as butterflies and pollinating bees.

Granules also offer excellent pest control properties in all environments when caring for animals. Can be used successfully with most household pet environments.* Cedar granules are perfectly suited for all livestock concerns including Horses, Cattle, Pigs, Fowl, Sheep, Goats and more. Superior pest control and larvacidal properties of cedar granules will help reduce or eliminate adult insect populations. Interrupts the insect life cycle by causing rapid de-hydration to eggs and larvae.

Natural microbial qualities of cedar will help reduce or eliminate mildews and neutralize bacterial growth. Objectionable odors are eliminated, not just masked. Sprinkle in areas you desire insect free or where you wish to enjoy the pleasant and exciting aroma of red cedar. Can be used to rejuvenate or stimulate cedar closets or cedar chests. An open container in your pantry will deter cereal beetles and other pests from harboring in foodstuffs. A little bit of these granules will go a long way.

Packaged in a 10 pound poly bag for extended shelf life.

Surface Area Coverage Estimate:

10 lbs. = Approximately 2500 sq. ft. of surface area.

Initial treatments and heavier insect infestations may require stronger applications.

* Presence of cedar in close proximity to pet reptiles, pet rabbits, pet mice, pet rats, pet ferrets, pet guinea pigs, or exotic pet birds can be harmful to these animals.

Nature's Defender Garden and Agricultural Concentrate
32 ounce or Gallon

Nature's Defender Lawn Kennel and Pet Concentrate
32 ounce or Gallon

Directions for Use:

Recommended Surface Coverage Estimates:

You cannot overly apply granule applications as it is a natural cedar product without synthetic chemicals.

- For General Use Cedar Strength - 10 lbs. covers 2,500 sq. ft. (recommended for most insect control needs and for maintenance applications.)
- For Medium Cedar Strength - 10 lbs. will cover 1,250 to 1,700 sq. ft. (recommended for first time applications, stubborn insect infestations, snake or rodent control and for grubs.)
- For Strong Cedar Strength - 10 lbs. will cover 1,000 to 1,500 sq. Ft. (May be used depending on needs and personal preference.)

For best results, we recommend performing maintenance applications every 60 days.

Granular performance can be enhanced by topping with Nature's Defender Lawn, Garden and Agricultural Cedar Oil Spray Concentrate Formula or Nature's Defender Lawn Kennel and Pet Cedar Oil Spray Concentrate Formula.

How to use cedar granules to protect perimeter of the home or other buildings against insect entry: *This outdoor protocol is the first line of defense for indoor pest control.*

Cedar granules will help keep pests out of your home or buildings. In addition to repelling and interrupting the life cycle of all insects of the arthropod family, cedar granules are also very effective at repelling Scorpions, Snakes, Termites and Rodents.

Choose coverage strength per guidelines above or to suit your individual preference. For first time application or for control of scorpions, snakes, rodents or grubs, we recommend medium cedar strength surface coverage around the perimeter of your property. After you have made the initial perimeter application, you can reduce coverage to general use levels for maintenance applications if desired.

Evenly apply a 2 foot wide mote around the home or other building foundation to ward insects from entering.

Re apply as needed, however as a general, rule it is best to re apply every 60 days.

How to apply for insect control for grass and lawn areas:

Choose coverage strength per guidelines above or to suit your individual preference.

For first time application or for control of snakes, rodents or grubs, we recommend medium cedar strength surface coverage. Subsequent maintenance applications should do well with general strength surface coverage.

Use a spreader designed for application of granular materials or simply hand toss cedar granules where pest control is desired. If using a spreader, adjust to largest material setting. Spread cedar granules evenly over the intended area(s).

Perform maintenance applications every 60 days.

How to control insects with cedar granules for Ornamentals and Flowerbeds:

Use 10 lbs. per 500 sq. ft. of surface area. Hand toss cedar granules into the beds.

Spread evenly over all areas to be treated. Repeat application if there are early signs of renewed insect activity within a few days to a week.

Granules should not to be incorporated into flowerbed soil. Rather they should sit on top of the soil to allow the cedar properties to emit into the air and soil. Can apply over any type of mulch material such as pine needles, colored mulches, pine mulch, cypress mulch.

Applying cedar granules under shrubs will repel mosquitoes and other offensive insects. All arthropod insects will halt reproductive and other activities from your treated shrub and flower bed areas. These pests will choose not to be in an atmosphere that includes severe life cycle interruption properties and extremely pungent insect repellent qualities of cedar.

Perform maintenance applications every 60 days.

How to reduce pests using cedar granules in vegetable gardens:

Use 5 lbs. per 500 sq. ft. when applied just after the planting or after plants emerge.

Use 10 lbs. per 500 sq. ft. Area for mature gardens.

Hand toss cedar granules onto the garden soil surface. Spread evenly over all surface areas being treated.

Perform maintenance applications every 60 days.

How to apply cedar granules for livestock related pest control:

Choose coverage strength per guidelines above or to suit your individual preference.

For use in and around animal housing facilities and for all environments when caring for livestock. Includes Horses, Cattle, Pigs, Fowl, Sheep, Goats and other Exotic Livestock.

Superior insect control properties of cedar will reduce insect populations commonly found around animals.

Natural microbial qualities of cedar will help reduce or eliminate mildews and neutralize bacterial growth. Objectionable odors are eliminated, not just masked.

Spread cedar granules as ground cover or over existing bedding materials. Use virtually wherever needed to help reduce presence of insects and harmful bacteria. Evenly apply a 2 foot wide mote to ground surface around perimeter of barns or other out building foundations to keep insects away.

Perform maintenance applications every 60 days.
